This document is our re-exam hand-in for the Advanced Augmented Reality Project. It serves as a navigational index into our itch.io project hub, where the full concept description, screenshots, *devlogs*, and build can be found.

Development Logs

The four devlogs below cover the full trajectory of the project, from ideation to the exposition. Headings indicate the phase (such as Create) and focus of each log.

- **Log 1, Experience Phase: Art Walk and Game Ideas** (March 25, 2025). Covers the Culture Safari art walk, the Empowered Participation role split, and the five candidate game concepts we produced with the Ideation Wheel.
- **Log 2, Play Phase: Converging on a Game Idea and Mechanics** (April 9, 2025). Documents the 6-8-5 sketching exercise, feedback from the Expert Council, and the AR interaction techniques we settled on for the prototype.
- **Log 3, Playtest Phase: Mockups, Demo Development and Think Aloud Playtest** (May 1, 2025). Three independent mockups, selection of one as the foundation for the full build, and a think-aloud playtest that directly reshaped the HUD and mob interaction design.
- **Log 4, Create Phase: EXPO Evaluation and Technical Reflection** (May 16, 2025). Summary of the ARoS exposition, the AR technical stack (MRUK and Spatial Anchors for projecting the board onto a real table on Meta Quest 2), results from our EXPO intended questionnaire, and reflections on object instantiation as the primary performance concern to address going forward.
